# Reading Double Line Graphs

How **do you** read a double line graph?

Line graphs can help you interpret and analyze data. They can also help you compare more than one set of data. Look at the double line graph below. It shows the growth patterns of two plants during an investigation. Notice the key in the upper left corner of the graph. The key explains how the data for each plant are shown.

Growth of Two Plants

Key:
Plant 1 ———
Plant 2 — — —

Height (cm)

Time (Days)

Show What You Know

1. What was the height of both plants at the start of the investigation?

_____

2. According to the graph, how much taller was Plant 1 than Plant 2 on Day 12?

_____

3. What pattern is shared by both plants beginning around Day 18?

_____
